Summary

Highly analytical Product Manager with over 5 years of experience at MathWorks, with demonstrated success in building 0-1 data-driven B2B platform products. Experienced in integrating AI technologies to enhance product capabilities and collaborating with internal and external partners to drive product innovation.

Experience

MathWorks- Hyderabad (May 2019 - current)
Product Manager

- Orchestrated the development and launch of a B2B platform product - Lidar Toolbox, a programming interface with **4 apps and 50+ functions** for processing lidar sensor data.
- Defined and executed go-to-market strategy; launched beta version, gathered customer feedback, and achieved a successful V1 launch, generating **half a million/year in revenue**.
- Conducted post-launch analysis and drove **market expansion** from the automotive industry to include the defense sector, resulting in a **60% increase in defense revenue**.
- Spearheaded the integration of sensor data from external manufacturers into Lidar Toolbox.
    - Coordinated with **external partners** and managed the project scope, timeline, and technical challenges, resulting in successful feature addition in the next release.
    - One such effort **increased the customer base in China by 8 times in 6 months**.
- Led the development of **AI workflows** in Lidar Toolbox, which emerged as the most used functionalities by our user base.
- Currently **repositioning** the product to achieve a million-dollar revenue target.
- Developed cross-product examples with Lidar Toolbox and other MathWorks products for **sales enablement.**
- Launched a support package with 2 apps and 20+ functions. Achieving over **2000 downloads with 350+ monthly active users.**
- Coordinated Product Field Team meetings for sales enablement and to align field interests with product development.
- Crafted customer-facing presentations, videos, webinars, and web pages to effectively communicate product features and benefits.
- Developed a feature request tracking system using Power Apps and implemented the RICE method for feature prioritization.
- Exploring productization of the support package based on data from customer engagements and **competitive analysis**.

Cell Propulsion Pvt Ltd- Bangalore (July 2017 - April 2019)
Lead Engineer, Autonomous Systems

- Led a team of 5 in developing autonomous navigation solutions, integrating vision-based perception, navigation, path planning, and control modules.
- Implemented end-to-end **AI (Convolutional Neural Network) based autonomous driving car**, successfully testing on controlled environments.
- Collaborated with stakeholders to define project goals and deliverables, ensuring alignment with company objectives.

Personal Projects

Mobile App for Reading Book Summaries (Flutter) (github)

- Developed a simple mobile app to read and track book summaries.
- Implemented daily notifications, progress tracking, and a bi-monthly revision feature to help retain key concepts from books read.

Interactive Architectural Visualization Project (Unreal Engine) (github)

- Collaborated with an architect to create an interactive ArchViz for a house project using Unreal Engine.
- Implemented interactive features for real-time exploration of design options and materials.

Skills

- Market Research and Analysis
- Customer-driven Feature Development
- Product Lifecycle Management
- Product Positioning
- Strategic Planning
- Cross-Functional Collaboration
- Product Roadmapping
- Stakeholder Management
- Sales Enablement
- Product Marketing

Education

M Tech: Mechatronics Engineering (April 2017)

- National Institute of Technology - Suratkal, Karnataka

B Tech: Mechanical Engineering (April 2014)

- TKM College of Engineering - Kollam, Kerala

Publications

Simultaneous Exploration and Coverage by a Mobile Robot, Control Instrumentation Systems. Lecture Notes in Electrical Engineering, vol 581. Springer (pp 33–41)

- Proposed a novel method for simultaneous exploration and coverage for mobile robots, addressing the task of completely covering an initially unknown region.
